Examiner: Yuan

S.N. 10/022,289

Art Unit: 1745

June 25, 2003

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-42, drawn to an electrochemical cell comprising a perchlorate salt in the electrolyte, classified in class 429, subclass 199.
 - II. Claims 43-47, drawn to processes for inhibiting aluminum corrosion in an electrochemical cell, classified in class 429, subclass 48.

The inventions are distinct, each from the other because of the following reason:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). The process recited in Group II can be used to fabricate a secondary electrochemical cell.

3. If invention I is elected, an election of species is required. This application contains claims directed to the following patentably distinct species of the claimed invention.

Group I-1, claims 1-3, drawn to an electrochemical cell comprising a cathode, an anode, a current collector and an electrolyte, wherein the electrolyte is essentially free of LiPF_6 .

Group I-2, claims 4-18, drawn to an electrochemical cell comprising a cathode, an anode, an aluminum current collector and an electrolyte, wherein the current collector is in contact with a second metal surface.

Group I-3, claims 19-36, drawn to an electrochemical cell comprising a cathode, an anode, an aluminum current collector and an electrolyte.

Group I-4, claims 37-41, drawn to an electrochemical cell comprising a cathode, an anode, an aluminum current collector, and an electrolyte, wherein the electrolyte containing about 500 to about 2000 ppm of a perchlorate salt.

Group I-5, claim 42, drawn to an electrochemical cell comprising a cathode, an anode, a current collector and an electrolyte, wherein the current collector comprising two pieces of aluminum in electrical contact with each other.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1745

6. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
